**THE UNIVERSITY
OF QUEENSLAND**
AUSTRALIA

A Composting Roadshow for the dairy and other intensive animal industries will be rolling through key regions of Victoria, NSW and Queensland in March next year.

The Composting Roadshow will be a unique opportunity for farmers to learn and share knowledge and experience about many facets of composting including feedstocks, composting principles, costs and benefits, regulatory requirements, mortality composting and the benefits of applying compost to land.

Both national and international speakers will be featured along with local practitioners ensuring that the Compost Roadshow is relevant to both novices and 'old hands' alike. Every year we learn more about how to make compost more efficiently and about the many benefits it offers farmers.

We guarantee attendees will leave with a better understanding of composting and how it can be "turned" to advantage.

Attendance of the Compost Roadshow events is free as they are supported by the Australian Government's Smart Farming Partnerships program.
